this book deals with the category of case and where to place it in grammar chapters explore a range of issues relating to the division between syntactic case and morphological case investigating the relevant phenomena and

drawing on data from a variety of typologically diverse languages

1.1 aims and assumptions this book presents an analysis of infinitival complement constructions in old french from the perspective of the government binding gb framework it aims therefore to establish within the terms of the gb framework just how the of constructions are to be characterized and in just what sense they can or cannot be compared with the corresponding constructions in other romance languages the gb framework is an articulated theory about the structure of language which is based on the view that the aim of research into language is to construct a description of language which accurately reflects its essential nature whilst we know that individual languages may appear to be superficially very different we also know that all languages are capable of expressing complex concepts and that all children acquire mastery of the language or languages to which they are exposed the task therefore is to determine both the properties which languages have in common and the bounds within which they may differ in the pursuit of these aims the study of various languages of the romance family has provided a rich source of material for the development of the descriptive apparatus evidence of the contribution supplied by such work is apparent in references to romance material in chomsky 1981 1982 in volumes such as jaeggli 1982 rizzi 1982a kayne 1984b burzio 1986 and in numerous papers devoted to particular constructions in a variety of romance languages

recent developments in generative grammar have been very stimulating the current theory defines a small set of

principles that apply to all human languages efforts have been made to demonstrate the adequacy of this theory for a wide range of languages we thus see an interesting interface of theory and empirical data the study of natural languages contributes to defining the properties of universal grammar and the predictions of the theory help in uncovering generalizations regarding natural languages this book aims to add to this exciting development by showing how the analysis of mandarin chinese constituent structures helps to define case theory and how interesting generalizations concerning chinese grammar are uncovered through verification of the theoretical predictions starting from the inadequacy of work by koopman li and travis on the effect of case directionality on word order the book shows that a detailed study of chinese constituent structures allows us to reduce the phrase structure component to a minimal statement concerning the position of the head in a given phrase it argues that in a given language the constituent structures can be adequately captured by the interaction of case theory theta theory government theory and x theory long standing controversies concerning chinese basic word order are resolved by showing that underlying word order generalizations can differ from surface word order generalizations
